Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at http://about.jstor.org/participate-jstor/individuals/early-journal-content.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

TABLE OF CONTENTS

VOLUME 4 1903

PAGES

ALLARDICE, R. E., Stanford University, Cal. On the envelopes of the axes of a system of conics passing through three points . . 103–106

BLICHFELDT, H. F., of Stanford University, Cal. On the order of linear homogeneous groups 387–397

BROMWICH, T. J. I'A., of Galway, Ireland. Similar conics through three points 489–492

BROWN, E. W., of Haverford, Pa. On the formation of the derivatives of the lunar coördinates with respect to the elements . . 234–248

_____ On the variation of the arbitrary and given constants in dynamical equations 333–350

COBLE, A. B., of Baltimore, Md. The quartic curve as related to conics 65– 85

COOLIDGE, J. L., of Cambridge, Mass. Quadric surfaces in hyperbolic space 161–170

DARWIN, G. H., of Cambridge, England. The approximate determination of the form of Maclaurin's spheroid 113–133

DICKSON, L. E., of Chicago, Ill. Definitions of a field by independent postulates 13– 20

_____ Definitions of a linear associative algebra by independent postulates 21– 27

_____ On the subgroups of order a power of p in the quaternary abelian group in the Galois field of order p^n 371–386

_____ On the reducibility of linear groups 434–436

EISENHART, L. P., of Princeton, N. J. Congruences of curves . . 470–488

EPSTEEN, S., of Chicago, Ill. On reducible groups 249–250

_____ Semireducible hypercomplex number systems . . . 437–444

FORD, W. B., of Ann Arbor, Mich. On the possibility of differentiating term by term the developments for an arbitrary function of one real variable in terms of Bessel functions . . . 178–184

HASKINS, C. N., of Boston, Mass. On the invariants of differential forms of degree higher than two 38– 43

HEFFTER, L., of Bonn, Germany. Ueber Curvenintegrale im m-dimensionalen Raum 142–148

HUNTINGTON, E. V., of Cambridge, Mass. Two definitions of an abelian group by sets of independent postulates 27– 30

_____ Definitions of a field by sets of independent postulates 31– 37

PAGES

HUNTINGTON, E. V., of Cambridge, Mass. Complete set of postulates for the theory of real quantities 358–370
KASNER, E., of New York, N. Y. The cogredient and digredient theories of multiple binary forms 86–102
_____ The generalized Beltrami problem concerning geodesic representation 149–152
_____ On the point-line as element of space: a study of the corresponding bilinear connex 213–233
LOEWY, A., of Freiburg i. B., Germany. Über die Reducibilität der Gruppen linearer homogener Substitutionen 44– 64
_____ Über die Reducibilität der reellen Gruppen linearer homogener Substitutionen 171–177
MANNING, W. A., of Stanford University, Cal. The primitive groups of class $2p$ which contain a substitution of order p and degree $2p$ 351–357
MASCHKE, H., of Chicago, Ill. A symbolic treatment of the theory of invariants of quadratic differential quantics of n variables . 445–469
MERRILL, HELEN A., of New Haven, Conn. On solutions of differential equations which possess an oscillation theorem 423–433
MILLER, G. A., of Stanford University, Cal. On the holomorph of a cyclic group 153–160
_____ (with H. C. MORENO). Non-abelian groups in which every subgroup is abelian. 398–404
MORENO, H. C., of Stanford University, Cal. (with G. A. MILLER.) Non-abelian groups in which every subgroup is abelian. 398–404
MORLEY, FRANK, of Baltimore, Md. Orthocentric properties of the plane n-line. 1– 12
_____ Projective coördinates 288–296
OSGOOD, W. F., of Cambridge, Mass. A Jordan curve of positive area 107–112
SHAW, J. B., of Decatur, Ill. Theory of linear associative algebra. 251–287
_____ On nilpotent algebras 405–422
VAN VLECK, E. B., of Middletown, Conn. On an extension of the 1894 memoir of Stieltjes 297–332
WESTLUND, J., of Lafayette, Ind. On the class number of the cyclotomic number field $k(e^{2\pi i/p^n})$ 201–212
WHITE, H. S., of Evanston, Ill. On twisted cubic curves that have a directrix 134–141
WILCZYNSKI, E. J., of Berkeley, Cal. On a certain congruence associated with a given ruled surface 185–200
